Approaches to tracking the impacts of library- and press-published monographs

Project Meerkat

@KevinSHawkins

University of North Texas Libraries

A vision conceived in collaboration with

- Joyce Chapman (Duke University)
- Sarah V. Melton (Boston College)
- Lucy Montgomery (Curtin University / KU Research)
- Katherine Skinner (Educopia Institute)

at the 2015 Scholarly Communication Institute (trianglesci.org). Others are now involved as well:

- Peter Berkery (Association of University Presses)
- Martin Paul Eve (Birbeck, University of London / Open Library of Humanities)
- James MacGregor (Public Knowledge Project)
- Cameron Neylon (Curtin University / KU Research)
- Lisa Schiff (California Digital Library)
- Melanie Schlosser (Library Publishing Coalition / Educopia Institute)

Data on scholarly publishing

Not

- datasets created by researchers
- other types of research outputs sometimes grouped together under “research data”

but rather *big data about published research*.

What kind of big data about published research? (1)

Data generated by publishers and aggregators of content

- **purchasing data:** customer type, number of copies, how much they paid, when they purchased
- **licensing data:** who licenses, how much they pay
- **online usage data / web analytics:** number of hits or visits, demographics of users, types of use (search vs. browse vs. download, part vs. whole)
- **subject classification** of products

What kind of big data about published research? (2)

Data from research institutions

- **Library data:** holdings, circulation, link resolver stats, subject classification
- **Structured productivity data** captured in an online faculty CV system, which may be referred to by any of the following names:
 - current research information system (CRIS)
 - faculty profile system
 - research profiling tool
 - research networking tool
 - research information system
 - research information management system (RIMS)

What kind of big data about published research? (3)

Data from third parties

- from **bibliometrics services**: journal-level metrics, article-level metrics, author-level metrics (including altmetrics)
- from **social networking sites**: Academia.edu, ResearchGate

All of these, like other forms of big data, can be used for various types of assessment and also for *predictive analytics*:

Which publications are most likely to be purchased, used, and cited?

We want the scholarly community to retain control over data related to publishing and be able to exert influence on how it's used.

We're going to need

- input and cooperation from all stakeholders in the system
- a neutral group taking on this work

Independent confirmation

Such as

- ISO 9001 (quality management)
- COUNTER (online usage statistics)

What if

we formed a cooperative of libraries, scholarly societies, publishers, aggregators, and other stakeholders, who would each contribute to the governance of this member organization.

Members contributed data they create about scholarly communication (their small view of the world).

The cooperative, thanks to member fees, had staff and tools to aggregate, normalize, and contextualize this data for its members, showing them how their data relates to that of all members but in a way that adheres to a code of conduct.

Members would have to agree to adhere to the code of conduct in how they use the data that they get back from the cooperative.

TOME

TOME (Toward an Open Monograph Ecosystem) advances the wide dissemination of scholarship by humanities and humanistic social sciences faculty members through open access editions of peer-reviewed and professionally edited monographs.

Scholars face growing difficulty in finding publishers for their monographs as academic library budgets shrink and demand for monographs falls. To collaboratively address this problem, the [Association of American Universities \(AAU\)](#), [Association of Research Libraries \(ARL\)](#), and [Association of University Presses \(AUPresses\)](#) launched this initiative in spring 2017.

In each of the first five years, [colleges and universities participating in TOME](#) are providing at least three baseline publishing grants of \$15,000 to support the publication of open access monographs. [Publishers accepting these grants](#)—for eligible books that have been approved through the usual editorial and peer-review processes—are making high-quality, platform-agnostic, digital editions freely available. These TOME-supported monographs will make new research freely available online, increasing the presence of humanities and social science scholarship on the web and opening up knowledge to more readers.

About TOME

TOME benefits scholars, the public, universities, libraries, and presses in several ways.

[Read more about TOME »](#)

Participating Colleges and Universities

The universities and colleges directly participating in this initiative incorporate three components into their digital monograph publishing programs:

Participating Colleges and Universities

The universities and colleges directly participating in TOME incorporate three components into their digital monograph publishing programs:

- Provide a baseline university publishing grant of \$15,000 to support the publication of an open access monograph of 90,000 words or less (with additional funding for works of greater length or complexity to be negotiated by the author, institution, and publisher).
- Set a target of awarding at least three publishing grants per year.
- Commit to participating in this initiative for five years.

The following institutions, listed here with their representatives to this initiative, have committed to participate:

- **Duke University**, Deborah Jakubs, Rita DiGiallonardo Holloway University Librarian
- **Emory University**, Michael Elliott, Interim Dean, Emory College of Arts and Sciences, Asa Griggs Candler Professor of English
- **Indiana University Bloomington**, Carolyn Walters, Ruth Lilly Dean of University Libraries
- **Michigan State University**, Christopher P. Long, Dean of the College of Arts and Letters
- **New York University**, Carol Mandel, Dean of the Division of Libraries
- **The Ohio State University**, Damon E. Jaggars, Vice Provost and Director of University Libraries
- **Penn State University**, Patrick Alexander, Director of the Penn State University Press
- **University at Buffalo, SUNY**, H. Austin Booth, Vice Provost for University Libraries
- **University of California, Davis**, MacKenzie Smith, University Librarian
- **University of California, Los Angeles**, Virginia Steel, University Librarian
- **University of Cincinnati**, Xuemao Wang, Dean and University Librarian, and Elizabeth Scarpelli, Director of the University of Cincinnati Press
- **University of Michigan**, James Hilton, University Librarian, Dean of Libraries, and Vice Provost for Academic Innovation
- **University of Minnesota Twin Cities**, Wendy Lougee, University Librarian and McKnight Presidential Professor
- **Virginia Tech**, Tyler Walters, Dean, University Libraries and Professor

Virginia Tech is leader in open access book publishing initiative

April 3, 2018

Danna Agmon, assistant professor of history, is the first scholar nationwide to receive a TOME grant.

Virginia Tech is one of only 12 universities across the nation to be invited to participate in a pilot initiative, [Toward an Open Monograph Ecosystem \(TOME\)](#), to provide greater access to scholarly books in the humanities and social sciences.

Faced with dwindling buyers for printed monographs, book-length works written primarily for specialized audiences, universities are looking for creative ways to publish their faculty's scholarship. TOME is

OA A Colonial Affair

Commerce, Conversion, and Scandal in French India

Danna Agmon

Publication Year: 2017

A *Colonial Affair* traces the 1716 conviction of Nayiniyappa, a Tamil commercial agent employed by the French East India Company, for tyranny and sedition, and his subsequent public torture, the loss of his wealth, the exile of his family, and his ultimate exoneration. Danna Agmon's gripping microhistory is a vivid guide to the "Nayiniyappa Affair" in the French colony of Pondicherry, India. The surprising and shifting fates of Nayiniyappa and his family form the basis of this story of global mobilization, which is replete with merchants, missionaries, local brokers, government administrators, and even the French royal family.

So many people have had a role in the writing of this book, and it is a joy to have an opportunity to finally thank them.

I am deeply indebted to the dozens of people, not all of whom can be listed here, who read the manuscript at various stages and so generously shared their insights with me; their good ideas profoundly shaped this work. ..

Tracking monograph impact: Altmetric's approach

Stacy Konkiel

May 22, 2018

Library Publishing Forum,
Minneapolis, MN

- ★ Why altmetrics?
- ★ Non-traditional impact trends for monographs
- ★ Challenges / Future work

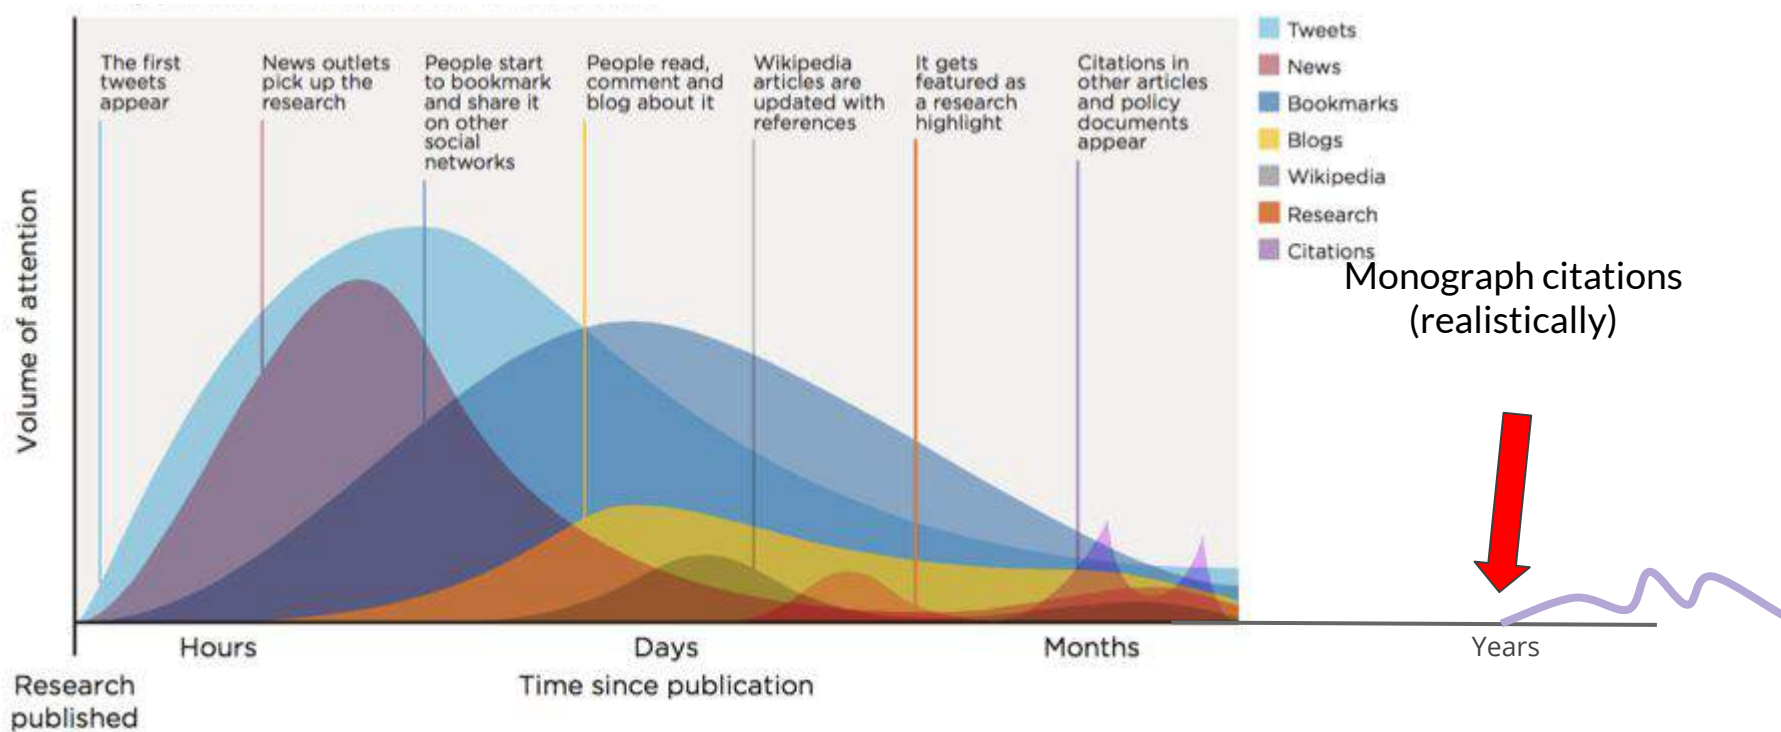

Why altmetrics?

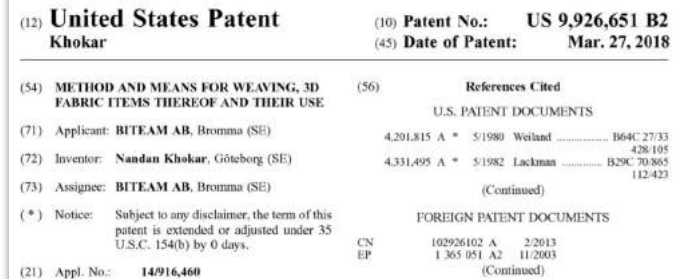

Why altmetrics?

1. Find attention before citations appear
2. Find non-scholarly attention
3. Use huge amount of available data to uncover new insights about monograph use and impact

A typical timeline of attention

From unexpected places

Huge amounts of data!

1.1 million+
books
5 million+
book chapters

1.9 million
tweets

48,000 policy
references

240,000
Wikipedia
mentions

138,000 news
mentions

7,000
citations from
patents

Non-traditional impact trends for monographs

What we track

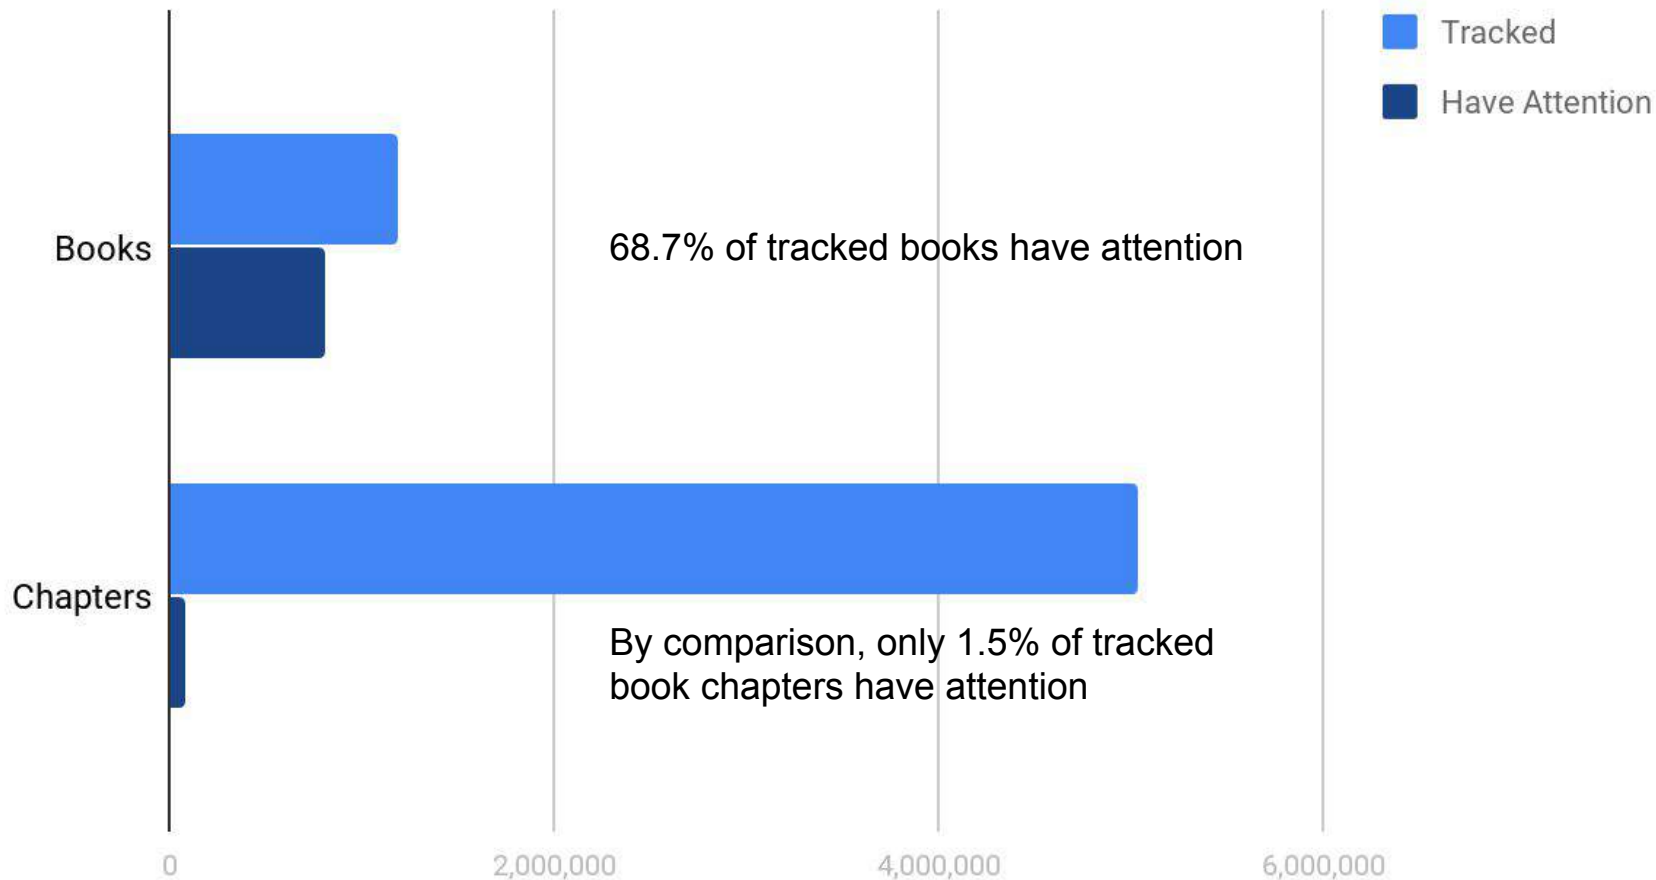

1.1 million+ books and 5 million+ book chapters

Published between **1681** and **present**

Subjects span **Poetry** to **Physics** and **all those in-between**

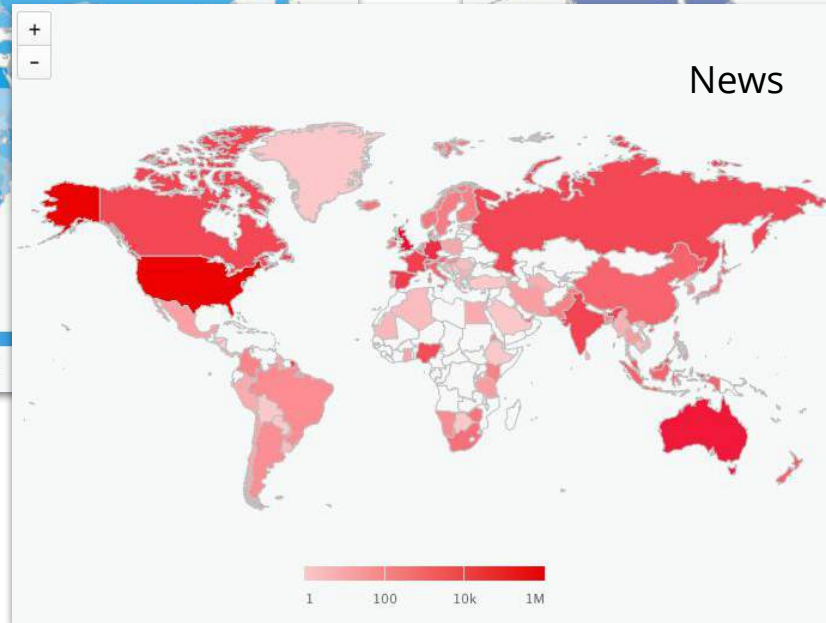

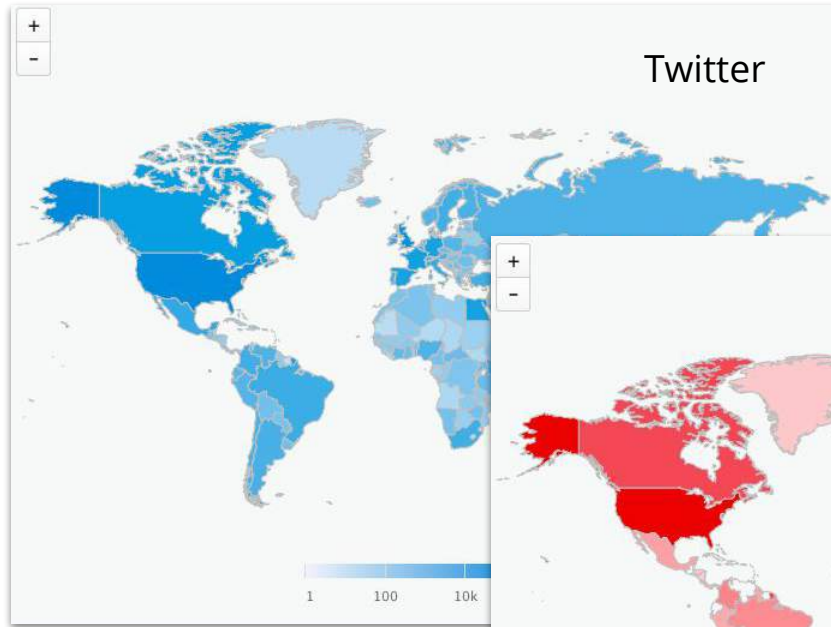

Proportion of books and chapters with online attention

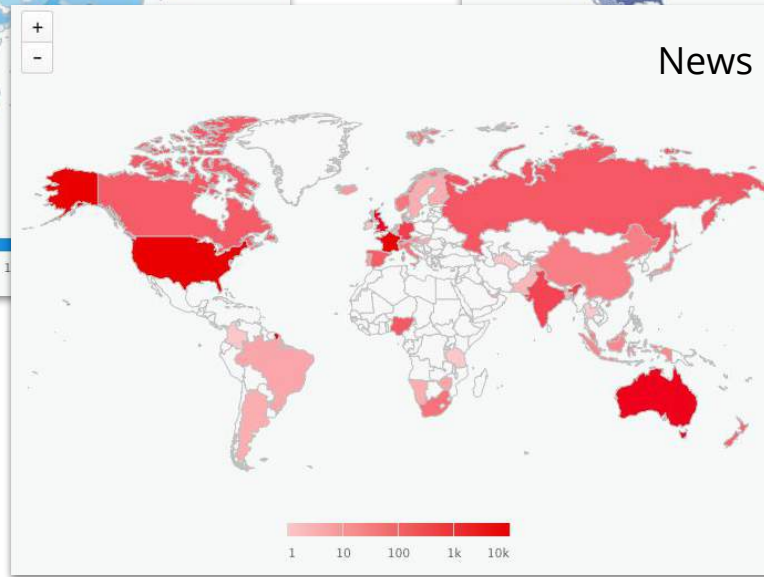

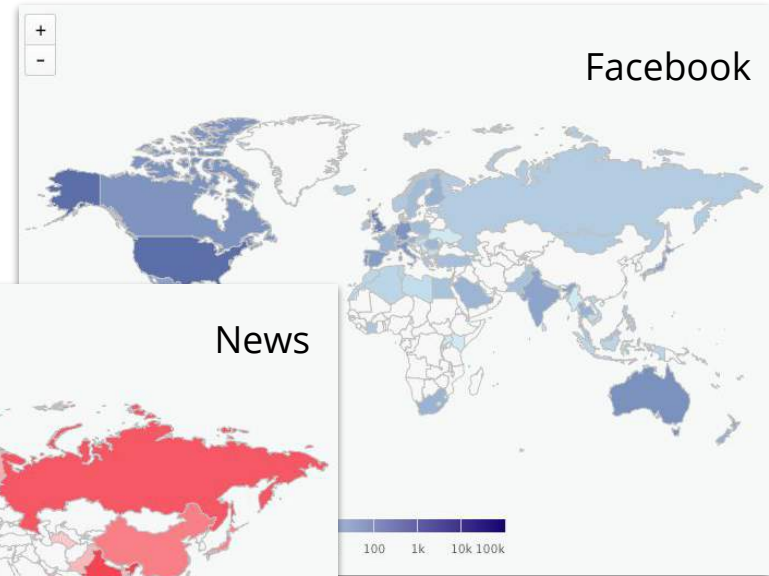

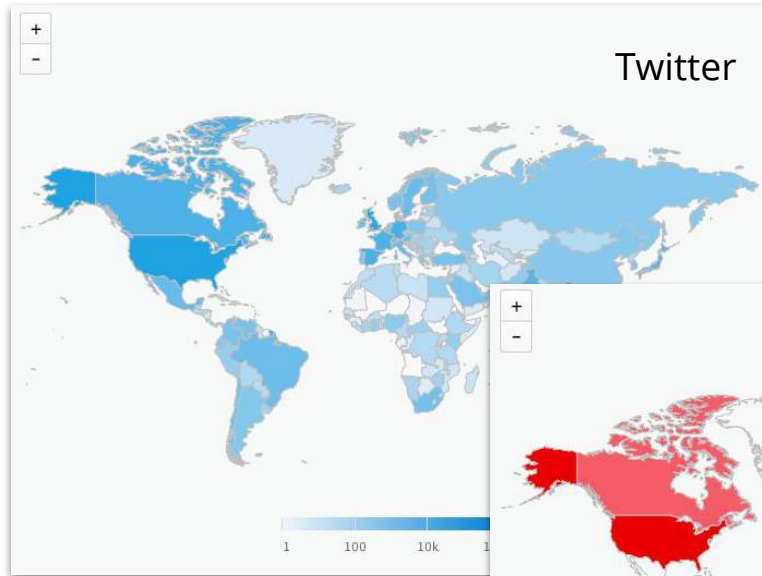

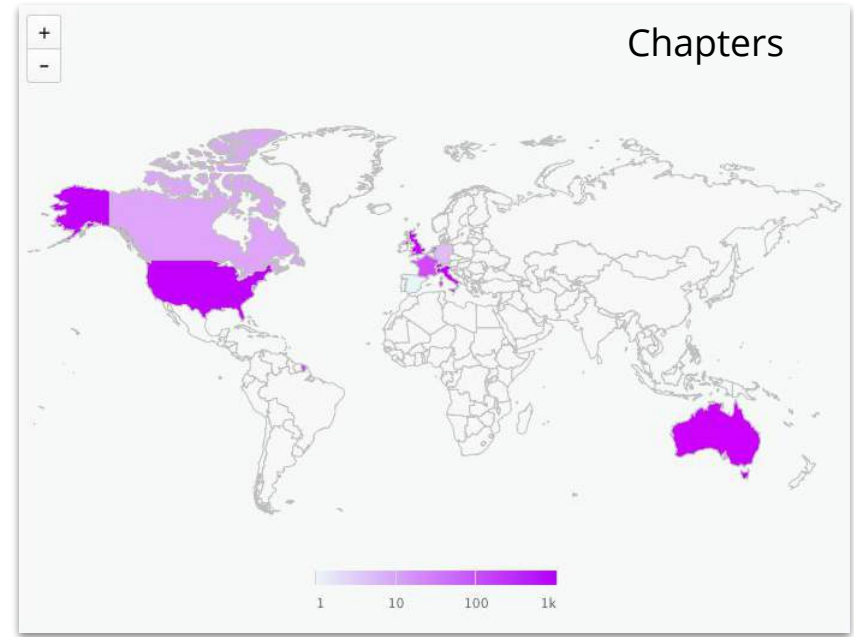

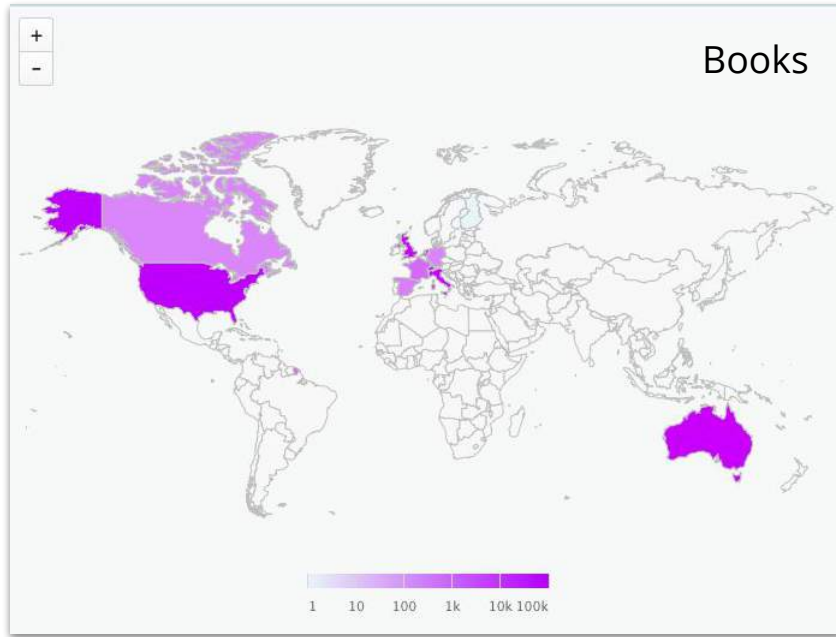

Book trends: social media & news

Chapter trends: social media & news

Comparative trends in public policy

The takeaways

Focus on books

Most attention from 2012 onward

Biggest bang for your buck in US & UK sources

Pay attention to the long tail

Future work

Increasing non-English attention sources

Identifying and tracking book-relevant
attention sources

Adding adequate metadata

Understanding differences in altmetrics for
books vs. articles, datasets, etc

Moving
beyond data
points

Thank you!

Stacy Konkiel
stacy@altmetric.com
@altmetric

How Altmetric* tracks attention for research

* and other altmetrics providers

For research to be tracked, we need...

A research output
with a...

Persistent identifier
that is...

Mentioned in a
source we track

Research outputs

Articles & preprints

Books

Book chapters

Datasets

Clinical trial records

News stories

...and countless other research formats, if a persistent identifier has been assigned!

Video data on figshare: [10.6084/m9.figshare.5721088.v1](https://figshare.com/data/articles/10.6084/m9.figshare.5721088.v1)

Identifiers

- DOIs
- PubMed IDs
- ISBNs
- Handles
- arXiv IDs
- ADS IDs
- SSRN IDs
- RePEC IDs
- ClinicalTrials.gov records
- URLs
- URIs
- ORCID identifiers

Data sources

16 types of platforms, thousands of sites indexed

- | | |
|---|--|
|  Policy documents |  Google+ |
|  News |  LinkedIn |
|  Blogs |  Reddit |
|  Twitter |  Faculty1000 |
|  Post-publication peer-reviews |  Q&A (Stack Overflow) |
