

Metadata for Everyone

Identifying Metadata Quality Issues Across Cultures

Is Metadata for Everyone?

Notes on metadata

Notes on metadata in the scholarly ecosystem

Exploring cultural quality in scholarly publishing metadata

Notes on metadata

Metadata (should) make local research visible and accessible for all audiences in our global scholarly ecosystem.

Making metadata that is considered high quality requires considerable time and labor.

Many of our technical systems and standards are built around the English language and Western ideas of knowledge and scholarly practice.

Notes on metadata in the scholarly ecosystem

ID

Researcher Identity

- disambiguating names & collocating work
- expanding research communities

Research Quality and Diversity

- broadening discovery, sharing, and (re)use
- amplifying voices and perspectives

Review, Promotion, Tenure

- research assessment based on metrics and citations (e.g., h-index, impact factors)

Exploring cultural quality in scholarly publishing metadata

1

Understand who is left out of metadata, even when standards are perfectly applied.

2

Examine how metadata systems capture the global nature of scholarship (or not).

3

Document the various ways that individual or community identity is asserted or retained in metadata.

Exploring cultural quality in scholarly publishing metadata

Discovery

- Establish scope and priorities
- Identify data sources

Phase 1

- Manual review of records to identify issues
- Determine a typology of common cultural issues

Phase 2

- Programmatically measure metadata quality based on identified issues

Identifying Metadata Quality Issues Across Cultures

Considering metadata quality

Defining scope

Close reading the records

Finding fields of focus

Considering metadata quality

“Metadata **quality** is a multidimensional concept” (Zeng & Qin 2016, 319)

Technical quality

Bruce & Hillmann (2004)

- Completeness
- Accuracy
- Conformance
- Usability

Cultural quality

Shiraishi (2019)

- Potential for harm or disservice to individuals or communities

Defining scope

Conceptual scope

- **Cultural issues:** Issues that impact, or have the potential to impact, the representation of identities, roles, intentions, and other factors specific to social, regional, or research cultures

Practical scope

- **Sample size:** 427 records from 68 DOI prefixes
 - **Publishing with OJS:** 51 records from 17 DOI prefixes

Close reading the records

“to examine a metadata record, which can be regarded as a surrogate of an item, a comparison between the surrogate and the original item is absolutely necessary” (Zeng & Qin 2016, 322)

About the journal

The *Transactions of Nonferrous Metals Society of China* (Trans. Nonferrous Met. Soc. China), founded in 1991 and sponsored by **The Nonferrous Metals Society of China**, is published monthly now and mainly contains reports of original research which reflect the new progresses in the field of nonferrous ...

Issues of Cultural Quality in Metadata

Distinguishing issues of technical vs. cultural quality

Surfacing a range of cultural issues

Defining a typology of issues

Surfacing a range of cultural issues

5 Main Forms

- Value absent
- Value in record does not match information in item
- Value does not match parameters of field
- In/completeness of value
- Value incorrectly input

32 Unique Issues

- registered URL invalid
- registered URL out of date
- value absent
- translation absent
- value in original language absent
- incorrectly input
- original-title used incorrectly
- lang attribute absent
- multiple languages in single field
- value incomplete
- value in record does not match info on website
- vor license terms absent
- additional persons listed
- author/s absent
- not all authors listed
- all authors listed as first
- first author not identified
- ORCIDs absent
- not all persons listed
- language style absent
- only provides initial/s
- affiliation absent for all authors
- affiliation absent for all editors
- organization as acronym only
- affiliations presented as authors
- multiple values in single field
- location absent
- Inaccurate (language or subject)
- not all publishers listed
- related orgs absent
- container title outdated
- subtitle absent

Distinguishing issues of technical vs. cultural quality

Record

0: given: "IRAM" family: "MANZOOR" ...	DR. IRAM MANZOOR Associate Professor ...
1: given: "Azeez" family: "Bukhari"	Mr. F. S. Azeez Bukhari 4th Year MBBS

Faculty names in all caps,
student names in regular case

Prestige

Significance of institutional representation or reputation

Record

author:

0:

name: "Research Scholar: Department of
Statistics, Quaid-i-Azam University
45320, Islamabad 44000, Pakistan"

sequence: "first"

affiliation: []

1:

given: "Zawar"

family: "Hussain"

sequence: "additional"

affiliation: []

2:

name: "Assistant Professor: Department of
Statistics, Quaid-i-Azam University
45320, Islamabad 44000, Pakistan"

Reflections & Next Steps

Interpreting the issues in the bigger picture

Understanding the limitations of this review

Next steps for *Metadata for Everyone*

Interpreting the issues in the bigger picture

Many of the identified issues may really just be the result of poor practice. It is just as possible, however, that issues result from deliberate acts.

Metadata “contribute to a story we are telling about ourselves as individuals, as organizations, and as a community” (Jaffe 2020, 441).

More work is needed to understand and address the ways that systems and standards render communities, worldviews, and stories invisible.

Understanding the limitations of this review

This review is not comprehensive. The issues and patterns found are specific to my interpretation of this sample.

The ability to recognize issues and nuances often depends on familiarity with particular social, regional, and research cultures.

Close reading the records alone does not tell us which issues result from poor metadata practice and which result from deliberate interventions.

Next steps for *Metadata for Everyone*

Phase 2: Programmatically measure metadata quality based on identified issues

To what extent are the types of metadata issues identified in this study present in the scholarly record?

Identify issues and measure quality and completeness for 100,000 metadata records

Analyze variations in quality by language of publication, publisher size, and other facets

Thank you to the team!

Project team:

- Juan Pablo Alperin (PKP / ScholCommLab / SFU)
- Mike Nason (PKP / UNB)
- Marco Tullney (PKP / TIB)
- Dennis Donathan II (PKP)

Lots of support from:

- The wonderful folks at Crossref!

Thank you for listening!
