What is Library Publishing?

Library publishing is the activities of academic libraries to support the creation, dissemination, and curation of scholarly, creative, or educational works.

Library publishing often requires a production process, presents original work not previously made available, and certifies the content, whether through peer review or branding.

It is distinguished from traditional publishing by preferring Open Access, informal and experimental forms of scholarly communication, and challenging the status quo.

North Broad Press

North Broad Press is a joint publishing project between Temple University Press and Temple University Libraries. We publish works of scholarship, both new and reissued, from the Temple University community. We primarily publish open educational resources with limited additional capacity to publish scholarly monographs, edited volumes, and digital scholarly projects. We consider other types of publications on a case-by-case basis. Everything North Broad Press publishes is open access and peer reviewed.

Any individual faculty, student, staff member, department, center, or college associated with Temple University is eligible to submit their own scholarly content to North Broad Press for possible publication. In addition, we accept proposals for publications from nonprofit external organizations and societies located in Philadelphia, as long as they are sponsored by a Temple faculty member. Our basic services are offered to our affiliates without charge, and we offer stipends to some Temple faculty members who author open textbooks with us.

Pending further notice, North Broad Press will not be issuing a formal call for proposals for the upcoming year. However, we will review faculty-authored open textbook projects on a rolling case-by-case basis. Please contact Mary Rose Muccie and Alicia Pucci for more information on how to apply.

The core principles of North Broad Press are:

- We believe that the Libraries and the Press are critical resources for publishing expertise on campus.
- We believe that the unfettered flow of ideas, scholarship and knowledge is necessary to support learning, clinical practice, and research, and to stimulate creativity and the intellectual enterprise.
- We support Temple faculty, students, and staff by making their work available to audiences around the world via open access publishing.
- We believe that the scholarly ecosystem works best when creators retain their copyrights.
- We believe in experimentation and innovation in academic publishing.
